

JSM for cutting steel sections

For underground use in coal mines and other mining applications

and pipe up to 300mm

Made for use in underground coal mining, the JSM is for cutting steel sections and pipe up to 300mm (12") diameter. The body is made from Zamac with no Aluminium content.

The Saw comes complete with a pipe & profile clamp and a blade guide to ensure straight cuts. Using it in a mounted position means there is no hand arm vibration problem. Optional automatic feed facility available on request.

This dual speed machine is fitted with automatic lubrication and a trigger lock.

Uses Cengar 25mm (1") wide Bi-Metal Saw Blades

Atex approved II 2G T5 I M2
